Name: Anti-Neurofilament Heavy Polypeptide Antibody [2F11] - BSA and Azide free

Description: Mouse monoclonal [2F11] antibody to Neurofilament Heavy Polypeptide.

Specificity: This antibody reacts with a 200kDa and 68kDa protein, identified as heavy and light

sub-units of neurofilaments (NF-H NF-L). Neurofilaments make up the main structural elements of axons and dendrites and are found in neurons, peripheral nerves, and sympathetic ganglion cells. Neurofilaments consist of three major subunits with molecular weights of 68kDa (NF-L), 160kDa (NF-M) and 200kDa (NF-H). Anti-neurofilament stains a number of neural, neuroendocrine, and endocrine tumors. Neuromas, ganglioneuromas, gangliogliomas, ganglioneuroblastomas, and neuroblastomas stain positively for

anti-neurofilament. Neurofilaments are also present in paragangliomas as well as adrenal and extra-adrenal pheochromocytomas. Carcinoids, neuroendocrine carcinomas of the

skin, and oat cell carcinomas of the lung also express neurofilament.

Applications: WB, IHC-P

Recommended Dilutions: WB: 1-2 μg/ml, IHC-P: 1-2 μg/ml

Reactivity: Human, Mouse, Rat

Immunogen: Native human NF-H isolated from brain cells.

kappa

Host: Mouse

Clonality: Monoclonal

Clone ID: 2F11

Isotype: IgG1

**Light Chains:** 

Conjugate: Unconjugated

Purification: Protein A/G chromatography.

Concentration: 1 mg/ml

Product Form: Liquid

Formulation: Supplied in 10mM Phosphate Buffered Saline; without Sodium Azide and carrier free.

Storage: Shipped at 4°C. Upon delivery aliquot and store at -20°C. Avoid freeze / thaw cycles.

General Notes: This monoclonal antibody is also available in a different formulation with BSA and Sodium

Azide - Anti-Neurofilament Heavy Polypeptide Antibody [2F11] (A250923).
