

Anti-FABP4 Antibody [FABP4/4429] (A277590)

Specifications:

Name: Anti-FABP4 Antibody [FABP4/4429]

Description: Mouse monoclonal [FABP4/4429] antibody to FABP4.

Specificity: Fatty acid-binding proteins, designated FABPs, are a family of homologous, cytoplasmic

proteins that are expressed in a highly tissue-specific manner and play an integral role in the balance between lipid and carbohydrate metabolism. FABPs mediate fatty acid (FA) and/or hydrophobic ligand uptake, transport and targeting within their respective tissues. The mechanisms underlying these actions can give rise to both passive diffusional uptake and protein-mediated transmembrane transport of FAs. FABPs are expressed in adipocytes (A-FABP), brain (B-FABP), epidermis (E-FABP, also designated psoriasis-associated FABP or PA-FABP), muscle and heart (H-FABP, also designated mammary-derived growth inhibitor or MDGI), intestine (I-FABP), liver (L-FABP), myelin (M-FABP) and testis (T-FABP). The human A-FABP gene is organized into 4 exons, maps to chromosome 8q21.13, and encodes a 132 amino acid protein. A-FABP protein comprises approximately

1% of the total cytosolic protein in human adipose tissue.

Applications: IHC-P

Recommended Dilutions: IHC-P: 1-2 μg/ml

Reactivity: Human

Immunogen: Recombinant fragment, around amino acids 1-132, of human FABP4 protein. The exact

sequence is proprietary.

Host: Mouse

Clonality: Monoclonal

Clone ID: FABP4/4429

Isotype: IgG2b

Light Chains: kappa

Conjugate: Unconjugated

Purification: Protein A/G chromatography.

Concentration: 200 μg/ml

Product Form: Liquid

Formulation: Supplied in 10mM Phosphate Buffered Saline with 0.05% BSA and 0.05% Sodium Azide.

Storage: Shipped at 4°C. Upon delivery aliquot and store at -20°C. Avoid freeze / thaw cycles.

Anti-FABP4 Antibody [FABP4/4429] (A277590)

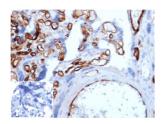

Specifications continued:

General Notes: This monoclonal antibody is also available in a different formulation without BSA and Sodium Azide - Anti-FABP4 Antibody [FABP4/4429] - BSA and Azide free (A278178).

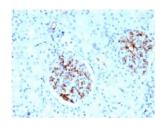

This product is for research use only. It is not intended for diagnostic or therapeutic use.

Images continued:

Analysis of protein array containing more than 19,000 full-length human proteins using Anti-FABP4 Antibody [FABP4/4429]. Z-Score and S- Score: The Z-score represents the strength of a signal that a monoclonal antibody (MAb) (in combination with a fluorescently-tagged anti-IgG secondary antibody) produces when binding to a particular protein on the HuProtTM array. Z-scores are described in units of standard deviations (SD's) above the mean value of all signals generated on that array. If targets on HuProtTM are arranged in descending order of the Z-score, the S-score is the difference (also in units of SD's) between the Z-score. S-score therefore represents the relative target specificity of a MAb to its intended target; a MAb is considered to be specific to its intended target, if the MAb has an S-score of at least 2.5. For example, if a MAb binds to protein X with a Z-score of 43 and to protein Y with a Z-score of 14, then the S-score for the binding of that MAb to protein X is equal to 29.
