

# Anti-p63 Antibody [TP63/4379R] (A278082)

#### Specifications:

Name: Anti-p63 Antibody [TP63/4379R]

Description: Recombinant rabbit monoclonal [TP63/4379R] antibody to p63.

Specificity: p63 is a homolog of the tumor suppressor p53. It is identified in basal cells in the epithelial

layers of a variety of tissues, including epidermis, cervix, urothelium, breast and prostate. p63 was detected in nuclei of the basal epithelium in normal prostate glands; however, it was not expressed in malignant tumors of the prostate. As a result, p63 has been reported

particularly when used in combination with markers of high molecular weight cytokeratins and the prostate-specific marker AMACR (P504S). p63 has also been shown to be a sensitive marker for lung squamous cell carcinomas (SqCC), with a sensitivity of ~90%. Specificity for lung SqCC, vs. lung adenocarcinoma (LADC), is approximately 80%. In

as a useful marker for differentiating benign from malignant lesions in the prostate,

breast tissue, p63 has been identified in myoepithelial cells of normal ducts.

Applications: IHC-P

Recommended Dilutions: IHC-P: 1-2 µg/ml

Reactivity: Human

Immunogen: Recombinant fragment, around amino acids 600-680, of human p63 protein. The exact

sequence is proprietary.

Host: Rabbit

Clonality: Monoclonal

Clone ID: TP63/4379R

Isotype: IgG

Conjugate: Unconjugated

Purification: Protein A chromatography.

Concentration: 200 µg/ml

Product Form: Liquid

Formulation: Supplied in 10mM Phosphate Buffered Saline with 0.05% BSA and 0.05% Sodium Azide.

Storage: Shipped at 4°C. Upon delivery aliquot and store at -20°C. Avoid freeze / thaw cycles.

General Notes: This monoclonal antibody is also available in a different formulation without BSA and

Sodium Azide - Anti-p63 Antibody [TP63/4379R] - BSA and Azide free (A278670).

Analysis of protein array containing more than 19,000 full-length human proteins using Anti-p63 Antibody [TP63/4379R]. Z-Score and S- Score: The Z-score represents the strength of a signal that a monoclonal antibody (MAb) (in combination with a fluorescently-tagged anti-lgG secondary antibody) produces when binding to a particular protein on the HuProtTM array. Z-scores are described in units of standard deviations (SD's) above the mean value of all signals generated on that array. If targets on HuProtTM are arranged in descending order of the Z-score, the S-score is the difference (also in units of SD's) between the Z-score. S-score therefore represents the relative target specificity of a MAb to its intended target; a MAb is considered to be specific to its intended target, if the MAb has an S-score of at least 2.5. For example, if a MAb binds to protein X with a Z-score of 43 and to protein Y with a Z-score of 14, then the S-score for the binding of that MAb to protein X is equal to 29.
